

Interlinked — Day Plan

Wednesday, July 15, 2026 · Week 1 (Jul 13–19) · Build day · Video 1 posts tomorrow

Today hits all three: move the canvas batch forward, get the LinkedIn post out, and start an annotatable research pile for a TikTok you'll post in the next two days. Build in the morning when your head is freshest; keep the lower-focus work (research reading, filming) for the afternoon.

The schedule

Morning — Build block (the real work)

A Mon/Wed/Fri build day, so the calendar already decided: canvas batch, one feature at a time. The in-flight batch is the two layout fixes (input below the dot; no more edit-jump), hint beacon verification, and the edit-color flow.

- Pick **one** item — don't touch two. Start with the "no more edit-jump" fix; it shows up in three lines of the regression script.
- One change → run the **3-minute regression script** → if green, **git commit** immediately. That commit is your undo button.
- Before you open the browser on a batch of edits, upload the file here for a static code audit — it caught a mis-pasted wrapper and an unattached ref last time in minutes.
- Move to the next item only after the last is committed green.

Week 1 canvas goal line: every in-flight fix applied, regression-tested, deployed. You don't have to finish all of Target A today — just move one item to green-and-committed.

Midday — LinkedIn post (20–30 min)

The polished version is below. Read it once out loud (that's how you catch anything that doesn't sound like you), drop your link in, post. It primes the audience right before Video 1 drops tomorrow — good sequencing.

Afternoon — Research pile for TikTok (annotate on iPad)

The goal isn't one perfect video today — it's to start *accumulating*. Pick one or two items from the reading list, annotate them on your iPad, and pull 2–3 lines that make you go "huh." That's your raw content. Aiming to post within two days, so today is read + annotate + rough script; filming can be tomorrow.

Late / optional — Film or schedule

If you have energy, film the research TikTok in the cico-buff register. If not, leave it — the drip is every 3–5 days, not daily. Don't let it eat the build.

Sunday reminder: this week ends light — update the bug list, rest. Burnout is the only real schedule risk the guide flags.

Polished LinkedIn post

Your draft was already strong — this is a light tightening, not a rewrite. Same voice, a little less throat-clearing, punchier line breaks for the feed. Swap in your link at the end.

I've been building something quietly for a few months. It feels like time to stop being quiet.

Interlinked is a daily reflection app. You get a prompt, turn the day's scattered thoughts into a single idea on a constellation map, and start noticing connections between things you didn't realize were related.

I'm a sophomore in biomedical engineering at Purdue, and this project has taught me almost as much as my classes have — building the whole thing myself in Next.js and Supabase, running user-testing sessions, and, more recently, actually sitting down to write a real brand and launch strategy for something I care about.

It's still early. Five people have tested it. I'm still writing the daily prompts myself.

But I'd rather share it now, in progress, than wait for a "done" that never quite arrives.

If you want to try it, the link's below. And if you do — I'd genuinely love to hear what you think.

[your link]

Optional tweaks: keep one specific detail only you'd say — e.g. a connection you noticed on your own map. Specifics travel further than polish. LinkedIn also slightly favors posts without a link in the body — you can move the link to the first comment and say "link in comments" for a little more reach.

Research reading list — digestible, annotatable

All picks are short reads or watchable videos, not paywalled journal slogs. Skim, annotate on the iPad, bank the good lines. Grouped by which Interlinked angle each one feeds.

The constellation metaphor — why "connect scattered thoughts" is real neuroscience

Your strongest *hook* material: the science literally describes what your app does.

- Video / 5-min read — [The Neuroscience of Aha! Moments](#). The right anterior superior temporal gyrus fires when the brain connects *distantly related* information — the exact move Interlinked prompts.
- Read — [Creativity and the default network \(PMC\)](#). The default mode network is active during rest and mind-wandering and combines memories and concepts without conscious effort. The reflective state your app creates is the brain state linked to insight.
- Quotable line: "*Insight isn't sudden — it's the culmination of brain states running at different time scales.*" Perfect voiceover over a constellation forming.

Why you're building it this way — autonomy, not addiction

Feeds the "isn't competing with TikTok on TikTok's terms" angle — good for a spicier, opinion-forward video.

- Video (10 min, genuinely fun) — [RSA Animate: Drive — the surprising truth about what motivates us](#). Autonomy, mastery, purpose. Why Interlinked leans on user-driven prompts and a non-competitive constellation instead of streaks and leaderboards.

- Read (4 min companion) — [Autonomy, Mastery, Purpose \(The Marginalian\)](#). Easy to annotate, quotable.

Expressive writing — the most credible "this actually works" claim

Decades of studies. Use this when you want authority, not novelty.

- Video — [APA · Expressive writing can help your mental health \(Pennebaker\)](#) (also as an [article](#)). Writing about thoughts and emotions produces measurable psychological *and* physical benefits. The nuance: how the prompt is framed changes whether it helps — a direct argument for your prompt-writing being the soul of the product.

Keep in your back pocket: all of this says the category is evidence-based, not that Interlinked itself is clinically validated. On camera, "built on the science of X" is fair game; "clinically proven to Y" is not. Keep the claim on the research, not the app.

TikTok hook — research edition

A separate lane from Video 1 (your founder story). This is the "curious BME student shares a cool brain fact and ties it to what she's building" register — the drip's content pillar. Post within 2 days.

Format: talking-head over a screen recording of a constellation forming, or you annotating on the iPad.

Hook options (first 2 seconds — pick one):

- "There's a specific brain network that lights up when you connect two unrelated ideas — and I accidentally built an app around it."
- "Your best ideas don't come when you're focused. Here's the neuroscience of why — and what I did with it."
- "I'm a biomedical engineering student, and this is the actual brain science behind the app I'm building."

Rough script (~30–40 sec):

Hook (option 1 or 2). "It's called the default mode network. It's most active when you're not focused — resting, walking, letting your mind wander. And it's the network linked to insight: the brain connecting distant, unrelated information into something new. That 'aha' feeling isn't random — it's the culmination of brain states running underneath the surface.

I've been building an app called Interlinked around exactly this. You get one prompt a day, turn your scattered thoughts into a single point on a constellation map — and over time you start seeing connections you didn't know were there. It's basically giving that brain network a place to work.

I'll link the research below. Still early, still building it myself — but this is the science I keep coming back to."

On-screen text: "the default mode network" · "active when you're NOT focused" · "the neuroscience of the aha moment" · "→ Interlinked"

Caption: short, curious, link the research + your app. Watch **saves and comments over views** — per your own brief, small-but-right beats big-but-wrong.

Today's definition of done

- One canvas item moved to **green-and-committed** (regression passed, git committed).
- LinkedIn post **published** (or scheduled).
- At least one research piece **annotated** on the iPad + 2–3 quotable lines banked.
- TikTok hook **chosen** and a rough script written (filming can slip to tomorrow).
